Avoid Costly Loss Of Documents Or Other Valuable Media!

Property Damage Restoration

Temporary Humidity Control

Property Damage Prevention

DOCUMENT DRYING & RESTORATION

Overview

Call Munters when books, documents, files, medical records, electronic media, audio/visual materials, x-rays, and legal records are water, fire and smoke damaged. Munters Moisture Control Services, the leading water damage recovery company in North America, has the expertise to evaluate and cost-effectively recover your potential information loss. Each year we save more than one million documents!

Who Can Benefit?

Thousands of groups have benefitted from Munters information recovery services including: libraries, archives, record management facilities, hospitals and clinics, colleges and universities, small businesses, museums and galleries. Munters is structured to manage any size job. From small, local libraries to large record storage centers, Munters is uniquely prepared to handle any emergency. With 30 company-owned offices throughout North America, Munters can be at any loss location fast.

Technical Consulting

Munters has the experience, knowledge and instrumentation to evaluate and scientifically measure the extent of your disaster damage. Our analysis and expertise will allow you to choose the most cost-effective recovery method for saving your documents, artifacts, or data.

Document Recovery Centers

Munters has strategically located document recovery centers throughout North America. As a result, the processing of your documents is expedited, facilitating a quick turn around time for completion and return of materials. Munters' document recovery center personnel undergo extensive training in all aspects of information recovery and are up to date on the most advanced techniques available, such as: freeze drying, blast freezing, microbial disinfecting, deodorization, soot (carbon) removal, etc.

Munters has document recovery centers in Boston, Chicago and Los Angeles. At each, the most advanced technology is used to dry, restore and preserve documents, books, x-rays and electronic media after disasters.

DOCUMENT DRYING
AND RESTORATION

Avoid Costly Loss Of Documents Or Other Valuable Media!

MEETING OUR CUSTOMERS NEEDS

Munters document and media recovery services are designed to meet our customers needs. We will handle your loss from beginning to end, managing the process in an orderly, disciplined manner. In some cases, it will be desirable to restore your documents and media on site. However, under most circumstances moving your information to a secure Munters document recovery center will be most advantageous. Munters will provide a solution that best meets your needs.

Mold Protection

Mold will quickly grow on water-soaked materials, or on documents and media stored in high humidity areas. Munters desiccant drying techniques eliminate the moisture that fungi require for growth. By quickly stabilizing water-damaged areas with dehumidification, the potential for active mold growth is greatly reduced, protecting your unaffected information.

Electronic Equipment and Data Storage Protection

Munters patented equipment can stabilize and control the ambient conditions in computer rooms and data processing centers. Vulnerable electronics can be preserved after fires from acidic corrosion. Cable runs can be dried quickly with cables in place. Storage media can be preserved. Moisture-laden, high humidity environments can be stabilized in time to save equipment.

Documentation

Whether you are drying, restoring or preserving your files or an entire data processing center, Munters monitors and measures the recovery process throughout its duration. Drying is controlled, avoiding the hazards of over drying or incomplete drying. All work is documented and at the end of the project, you receive a full written report.

THE MUNTERS ADVANTAGE

Munters offers the most advanced techniques for document recovery and complete media restoration services. Call Munters for:

- Emergency services
- Complete project management
- Application of disinfectants
- Smoke and soot (carbon) removal
- Deodorization
- Media and document restoration
- Dehumidification and drying
- Vacuum freeze drying
- On-site drying
- Microbial disinfecting
- Copying and storage
- Consulting
